

BizBotics Automation Engineer

You are responsible for the smooth operation of the Robot today. Your business is responsible for producing JA BizTown tokens out of pennies using the penny press with the help of a robot. Make sure that you are familiar with your responsibilities and the safety instructions.

1. Meetings

Attend any meetings called by the CEO or volunteer.

2. Carefully read the Robotics Manual & Safety Card

3. Watch Programming Video

When the CEO is done with their iPad, ask them to borrow it. Open the Files app and watch the video that gives an overview of programming the robot.

4. Program the Robot

After you watch the video, return the iPad to the CEO and use the instructions in the **Robotics Manual** (orange folder) to program the robot. Ask the Production/Machine Operator and the Quality Manger to help you. This will be a team effort! Work hard to meet your production goal and to make the highest quality products possible.

5. Penny Count & Delivery

If time permits, help your CEO with their BizBotics Penny Count and Delivery Checklist on their clipboard.

6. Clean Up

Assist with business clean up at the end of the day.
